

1. Speed dating

a. <https://www.openml.org/search?type=data&status=active&sort=runs&id=40536>

- i. 2002-2004
- ii. This dataset is a number of people went on dates and were interviewed after and may be able to determine what makes a good partner
- iii. I'm interested to see what variables affect whether someone liked their partner or not (var: Like) or if they ended up being a match(var: Match)
- iv. I've looked through some of the data but nothing crazy yet
- v. It interested me because it is a very unique data set and seems to more interesting than the other options i came across

2. Electricity

a. <https://www.openml.org/search?type=data&status=any&sort=runs&id=151>

- i. 1996-1998
- ii. This is a data set of 30 minutes worth of electricity demand for the Australian New South Wales Electricity Market. Which covers two different cites. This information was used to figure out when to pull electricity from one city to the other based on demand cycles
- iii. I'm interested to see when people need the most electricity, how much people are paying at different times or the day and year and how you can better use your electricity.
- iv. I haven't look at the real numbers but I've seen the basic description.
- v. This interests me because it's not like other data I've seen before and I'm interested to see the shifts in demand based on time.

3. Football

a. <https://www.openml.org/search?type=data&status=any&sort=runs&id=470>

- i. 1998-1991
- ii. This dataset is a series of games that Las Vegas odds makers have used to try and get better at making predictions
- iii. I'm interested to see how they make predictions
- iv. I haven't seen the data yet but i would like to
- v. This interests me because I like to watch football and betting lines have always been very interesting to me so I would like to see where they get their numbers from.
